

Single Preset Lighting Desks

MINI DESK 4, 6 & 12

Mini Desk 12
Panel version

If basic control of lighting is required, Anytronics manufacture a range of single preset desks called the Mini Desk 4, 6 and 12. Rugged, easy to install and operate with the reliability Anytronics is renowned for worldwide.

Each Mini Desk has a slider and flash switch for each channel, a master level slider and blackout switch. Outputs on the Mini Desks are via 8 pin ring locking DIN sockets and screw terminals whereas the pin outs on the Mini Desk 6 and 12 match those used on 19" rack mounting dimming packs, Series 192, 193 and 194.

Three Mini Desk 4's or two Mini Desk 6's can be mounted into the Anytronics skeleton panel (19" x 3U) or can be used free standing or wall mounted. If the Mini Desk 4 or 6 are to be mounted into a skeleton panel, the rear covers will need to be removed.

The Mini Desk 12 is already in 19" x 3U format, but it can be used free standing or wall mounted.

Please note that the Mini Desk 4 could be mounted along with two SD4 fader panels into a skeleton panel and its master level slider can be used to control the two SD4's thus making a 12 channel Mini Desk with external input facility on the first 8 channels.

- Master level control.
- Blackout switch.
- Mini Desk 6 & 12 have blackout switch status indication on.
- Channel flash switches on all channels.
- 60 mm metal construction sliders.
- Mini Desk 6 available as desk top or panel mount versions.
